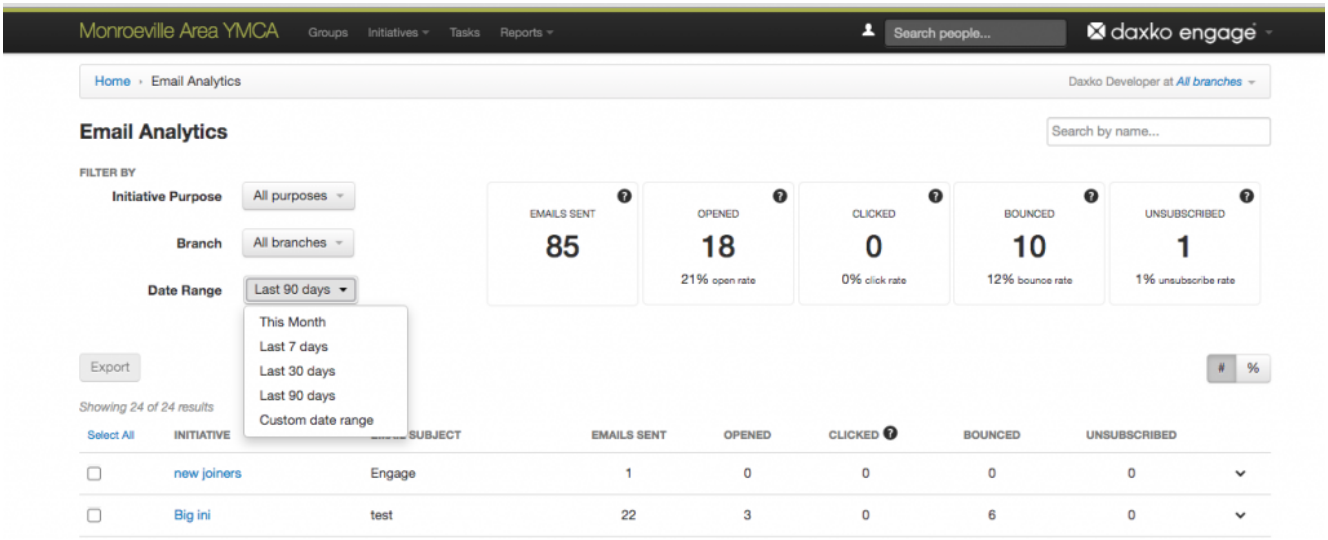
Date Filter for Email Analytics + More

This Daxko Engage release contains a few feature enhancements, plus some minor maintenance items and bug fixes.

Date Filter for Email Analytics
Viewing your email stats just got a little simpler. With this release, Daxko Engage users with access to Email Analytics can now filter this report by date range. Use this filter to view specific initiative metrics, track trends for a specific period of time, and measure progress.

The filter is based upon the **email send date, not the initiative launch date**. Keep in mind that emails may be sending regularly for ongoing initiatives your organization launched many weeks or months ago.



Prospect Notes in "What's Going On?" Tab
We recently added prospects into Daxko Engage and gave users the ability to log notes about prospects. With this release, you'll now see notes about prospects within the "What's Going On?" tab visible from the home screen.

The above features will be available on **Friday, September 18**. Check out the release notes here. If you have questions or feedback, please connect with support@daxko.com for more details.
