

# Daxko Operations: Page Design Updates + Coming Soon Features

With this release, we're continuing to make design updates to a few pages in Daxko Operations. As you have noticed over the past year, we have been making usability updates to many pages across Daxko Operations. Throughout the system you'll notice a refreshed look and feel to buttons, links, and other elements. However, core functionality hasn't changed with these updates.

Here are the pages being updated with this release:

- Member Photo
- Create Invoice
- Membership Hold & Termination

These updates will be available to all customers on **Wednesday, August 30**.

---

## Coming Soon...

Later this year, we'll be introducing a couple of exciting new features in Daxko Operations. Here's a sneak peek at the **Child Profile** and **Community Events**.

### Child Profile

The new **Child Profile** provides a dedicated childcare profile that parents & guardians can access and update before, during, and after registrations. Early adopters who have been using the Child Profile have been able to streamline their childcare registration process by reducing the number of common questions asked by around **70%** while also allowing parents & guardians to update Child Profile questions before, during, and even after registration.

## Community Events: Event Creation + Ticketing

We are thrilled to introduce a streamlined way to create and sell ticketed events that help you connect and engage with your community like never before. With the all-in-one “Community Events” builder in Daxko Operations, you can create, manage, and sell event tickets in one simple place.
