

# Daxko Operations: Recently Viewed Members + Additional Design Updates

This week's Daxko Operations release includes another exciting enhancement to the Member Search page, making it easier to access recently viewed members. In addition, we're introducing updated design elements throughout Daxko Operations in our continuous effort to improve usability. Check out more details below!

## Quickly Revisit Recently Viewed Members

Your welcome center staff members stay busy serving your members, so we're always looking for ways to make their tasks in Daxko Operations more efficient. In addition to [enhancements to the Member Search experience](#) released earlier this year, users can now see a new section called **Recently Viewed**. This area will serve as a search history by showing the members that users have clicked on in order from newest to oldest. We believe this will improve the navigation in Daxko Operations for front desk staff whose workflow often includes helping repeat visitors.

Read more details about this enhancement [here](#).

## Design Updates

As you have noticed over the past several months, we have been making usability updates to many pages across Daxko Operations. With this release, we're continuing that with additional design updates, so throughout the system you'll notice a refreshed look and feel to buttons, links, and other elements — both in-house and online. However, core functionality hasn't changed with these updates.

---

The above updates will be available to all users in their Training and Live sites on **Thursday, April 13**. If you have any questions, please contact [support@daxko.com](mailto:support@daxko.com).
