

Daxko Accounting - E-Signatures and Grant Management Updates

In Daxko Accounting release 22.3 we are happy to include new features to improve the logistics of your Accounting practices. Our increased focus on reducing inefficiencies and enhancing the product to match the digital experience you expect is reflected in this latest release.

The main focus of this release is the addition of E-Signatures and enabling Grant Management in your live site.

E-Signature

Using E-Signatures in Daxko Accounting allows you to electronically apply a user's signature to checks for printing. A user with the correct permissions will be able to create an electronic signature and then assign permissions to other users to apply this signature to checks. Get started with the user guide [here](#). Starting Thursday 6/23, reach out to support@daxko.com to see if your check template is supported and if you wish to have this feature enabled on your live site at no extra cost.
