New Attendance Data in Custom Reports

This release contains an addition to custom reporting in Daxko Operations and a clarification for Attendance Tracker functionality. These changes are scheduled to roll out on **Wednesday, September 4th.**

In This Release

New Attendance Data Source in Custom Reports

We are adding a data source named "Child Care Attendance" that will allow association to report on the check in and check out times of child care and camp participants **for the last six months**. This data source includes data entered through any of our attendance tools – Attendance Tracker, Attendance Dashboard, and Roll Call. When accessing the data source, users will be able to choose the following data:

- Member ID
- Site ID
- Branch ID
- Date
- Check In Time
- Check Out Time
- Full Day or Partial Day (Before, After, Before & After)

Unique Phone Number for Attendance Tracker

For associations that are using the Authorized Pickups verification through the Attendance Tracker, the Parent Mode is now looking only at the phone number listed for each authorized pickup. This means that a parent who is also a member on the same membership as the participant will have one valid number to enter if a site is using Parent Mode. This is a consistent requests for associations that are require to have only one numerical identifier per pickup to meet licensing requirements.
