# Updated Groups List + Email Editor Changes

This release introduces useful enhancements to the Groups list, giving you more information about Groups at a glance. We have also made changes to the Email Editor, including a new content block option called Icons.

(Internet Explorer users, be sure to review below section about the changes we've made that affects access to the Email Editor.)

Finally, for associations using text message features, this release also includes a small enhancement to the way we display people waiting for a text message in multi-step initiatives.

Groups List Updates

- View Running Initiatives using Groups
- View number of people in Groups
- See which user last updated Groups
- Group Actions menu

Email Editor changes

In order to take advantage of new features and to provide the best email creation experience, we have upgraded the Email Editor to the latest version. Aside from

the new Icons feature, you shouldn't notice much difference.

However, **the new version of the editor is not supported by Internet Explorer browsers**. If you have been using Internet Explorer, please consider making the switch to Chrome (our recommendation), Firefox, or Safari.

New "Icons" content block in Email Editor

Sometimes, design layouts require mixing icons or images with text. With the new Icons content option, you'll be able to create icon-based content for lists or other content rows that need to include multiple images.

Display people awaiting text message

Given text message send time guidelines, we will now show a "People Here" column for text message steps in the Initiative Workflow details. This number will display the members set to receive a text message once we're able to send the messages.

Review the [full details here](). The above features will be available on **Friday, July 17**. If you have any questions, please reach out to support@daxko.com.
