Virtual Areas Now Available!

This release includes feature expansion for virtual check-in areas, allowing an association to create rules for which memberships may access webpages containing content. This release will be available to all associations on **Wednesday, June 10th.** This release also includes several updates to existing functionality and reports.

For our previous virtual areas release, please reference [our April 15th release](#).

Virtual Areas

The world is rapidly changing in this unexpected season, and many things seem uncertain as we move into the future. However, one thing that is certain is that individuals are actively seeking web content (videos, articles, etc.) for health and wellness at home. While some content may be available to anyone visiting an association's website, many of you want to craft custom experiences for specific web content. This release will combine the business rules that you choose for who should access content with the validation of a virtual check-in.

To learn more about this feature and how to get started, check out this week's [User Guide](#).

Other Updates

We have included several enhancements to existing functionality with this release.

- Child Watch – The Area selected for the adult dropping off the child will now automatically check the adult in as long as capacity has not been met for that area.
- Area Capacity – Members will now be able to see branch capacity *and* area capacity in their online account. (Screenshot below)
- Facility Usage Report – We have updated this page layout and design in preparations for updates to areas in our next release. This only includes design changes and no functional changes.
