

# TRUSTED SCREENING

## Why do I need a Registered Sex Offender screening solution?

There are approximately 279 registered sex offenders for every 100,000 people in the United States.<sup>1</sup> As a community leader, the safety and security of your members is of utmost importance.

Implementing a screening solution ensures you are creating a safe and secure facility experience and empowering efficiency for staff and volunteers.

## How does Trusted Screening work?

Trusted Screening, powered by Raptor Technologies, is an integrated registered sex offender screening solution.

Trusted Screening checks all active and inactive members against a trusted sex offender database and is accessed directly through your Daxko Operations system—keeping work in one place.

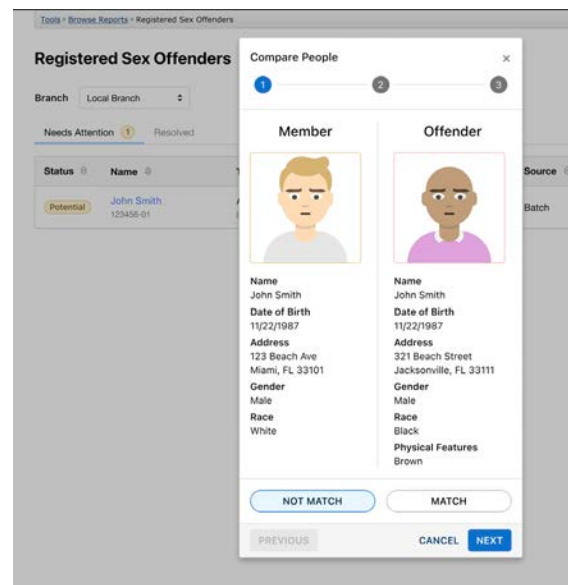

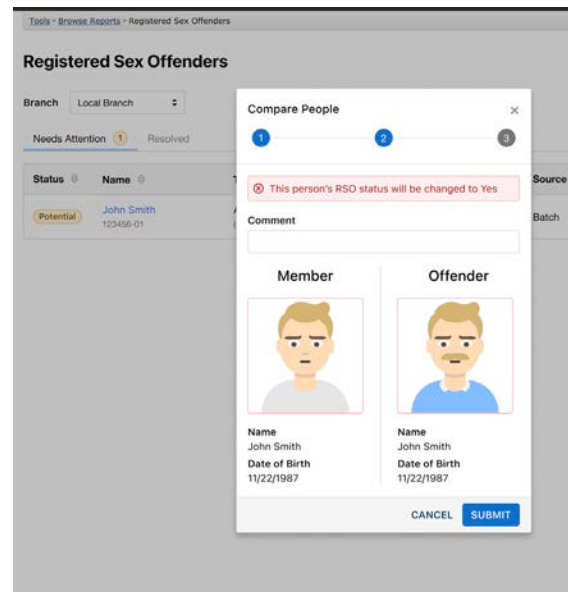

Monthly batch screenings are automated—alleviating manual uploads and helping to reduce errors.

Results are displayed in a side-by-side comparison screen, making reviewing potential matches easy and efficient for staff and volunteers.

For added safety and security, real-time checks occur at facility access points and automated screenings for any new in-house or online joins.

## Who should use Trusted Screening?

- **Facility leaders** who are looking to keep members safe and build trust within their communities.
- **Staff and volunteers** who manage check-ins and the joining process, who want an efficient and effective screening tool.
- **Organizations** offering childcare and youth programming, who want to provide a safe environment where children can thrive.
